

The Crime Scene – Illuminated

The Revelation Forensic Laser

Light up the crime scene

Introducing the new range of crime scene lasers from Laser Innovations. This new generation of lasers combines the reliability and power that are the hallmarks of Laser Innovation products, with the increased flexibility needed to investigate modern crime scenes.

Our lasers are truly portable and rugged, meaning they are ideal for using on location or in the laboratory. All systems are capable of finding latent marks with, or without, chemical enhancement and are extremely easy to operate. Our range includes both single and dual-band systems as well as a uniquely compact blue (445nm) system. Modifications include the option of having an extra-long fibre for searching large objects or where access

is more difficult. They come with built in safety features that comply with EU and US FDA regulations.

Revelation Green (532nm) – Crime Scene

This was our original system and is light and compact. Much improved, it is tailor made for external work with the option of mains or battery operation. It is ideal for finding fingerprints, fibres, bone and other trace evidence.

Revelation Green – Laboratory System

Wall or floor mounted, this compact system is also very easy to operate. It can be supplied with an extra long fibre for searching vehicles and other large objects.

Conventional Light

445nm laser

Revelation Blue (445nm) – Crime Scene

This system is truly remarkable in the way it combines power with portability. Weighing less than 4kg, but producing 6W of laser light, it will run off a single battery charge for up to 20 hours. It is ideal for finding body fluid trace evidence. (See comparison left)

Revelation Dual – Crime Scene

Our latest product, this system combines both 532nm and 445nm wave lengths to provide ultimate flexibility. The advantage of having both wavelengths in one system means a greater chance of identifying different sources of trace evidence at the scene.

- Operates at 90 VAC - 240 VAC and/or integral battery
- Truly lightweight and portable
- Outstanding clarity
- Ergonomic handpiece
- Rugged and durable carrying case
- Safety Interlock

About Laser Innovations

Laser Innovations has been manufacturing lasers, and helping you to solve crimes, since 1991. Our global network means you can quickly and easily obtain local support. Please contact us to find your nearest agent. Our customers are important to us and we pride ourselves on our customer service. Indeed many of the improvements to our systems derive from direct feedback from the world-wide forensic community.
